

# Example of running the *parcel* package

```
In [1]: # This is a tutorial to demonstrate use of the *parcel* package,  
# which maps the boundaries of properties from survey descriptions.  
#  
# It starts from deeds as pdfs, and parses them for numerical information.  
#  
# The package is especially designed to deal with 19th-century and other old  
# deeds, since old property descriptions are often repeated in recent deeds,  
# and historical boundaries can be important for property issues.  
#  
# This is not the work of a licensed surveyor.
